Android Studio brings tons of keyboard shortcuts that helps developers to keep hands more on keyboard rather than relying much on the mouse. The lesser you use mouse, results in faster development.

Here are some general tips how to boost your productivity and get your development on a higher level.

DEMO

Android Studio Plugins

ADB Idea

ADBWiFi - debug android app over Wi-Fi

Inner Builder - adds a 'Builder' action to the Generate menu

Android Parcelable code generator - generates an Android Parcelable implementation based on fields in the class
